

Guardian™ Heater Outdoor Mount Kits

Guardian 250
Guardian 325

Outdoor mounting offers better performance and greater convenience

Guardian's optional outdoor mount offers advantages in performance, cost, and reliability.

- **PERFORMANCE:** Fresh, outside air is drawn into the heater for combustion. That means cleaner combustion and better inside air quality.
- **RELIABILITY:** Longer life. Heaters and gas piping are not exposed to the corrosive barn environment, minimizing component damage from dust and moisture accumulation. Enjoy lower maintenance costs.
- **COST:** Lower installation expenses and fewer replacement parts.
- **CONVENIENCE:** No heater in the way inside the building. Since heater maintenance is performed outside, biosecurity concerns are decreased.
